What is it and what can you do with it?

This is your profile page on UsPaCe. If you have used MySpace, Facebook, Bebo, etc it is a bit similar to those sites where you have your own page.

It is the place where you can tell others a bit about yourself and your interests. Reading other users' profiles will enable you to find people with similar interests. Along with this information you are able to add widgets to your page which allow you to bring content in such as videos from YouTube for example. You are able to add a picture to your profile too.

Cinema 4D, etc, Flash, Lightroom, Photoshop, PHP, Premiere

What else to consider?

It is important to remember that you have the option to make each piece of information private and restrict it to only certain users or even just yourself. You should be careful about making personal information such as phone numbers etc available although you are reasonably safe as only UsPaCe users can access the system and no one can find information from the outside internet through searching Google or suchlike.
