

Receiving a link from a person or group in your network

Following on from the previous guide, I am now going to show you how you receive a link.

Firstly I have logged into my account. At the top I can see the “1 new” message link. I now click on this link.

The links for you page then opens displaying a list of bookmarks you have been sent. As you can see below there is one link waiting to be saved. To save it we then need to press “**save**” to the right of the link.

After we have pressed “**save this**” you are presented with the familiar form where you add tags and notes etc. However there is additional information available. You can see the tags that the sender has suggested and you have the option of changing these.
